
CatchmentCollector Documentation

Release 0.1

DG Plugins

Feb 18, 2025

CONTENTS

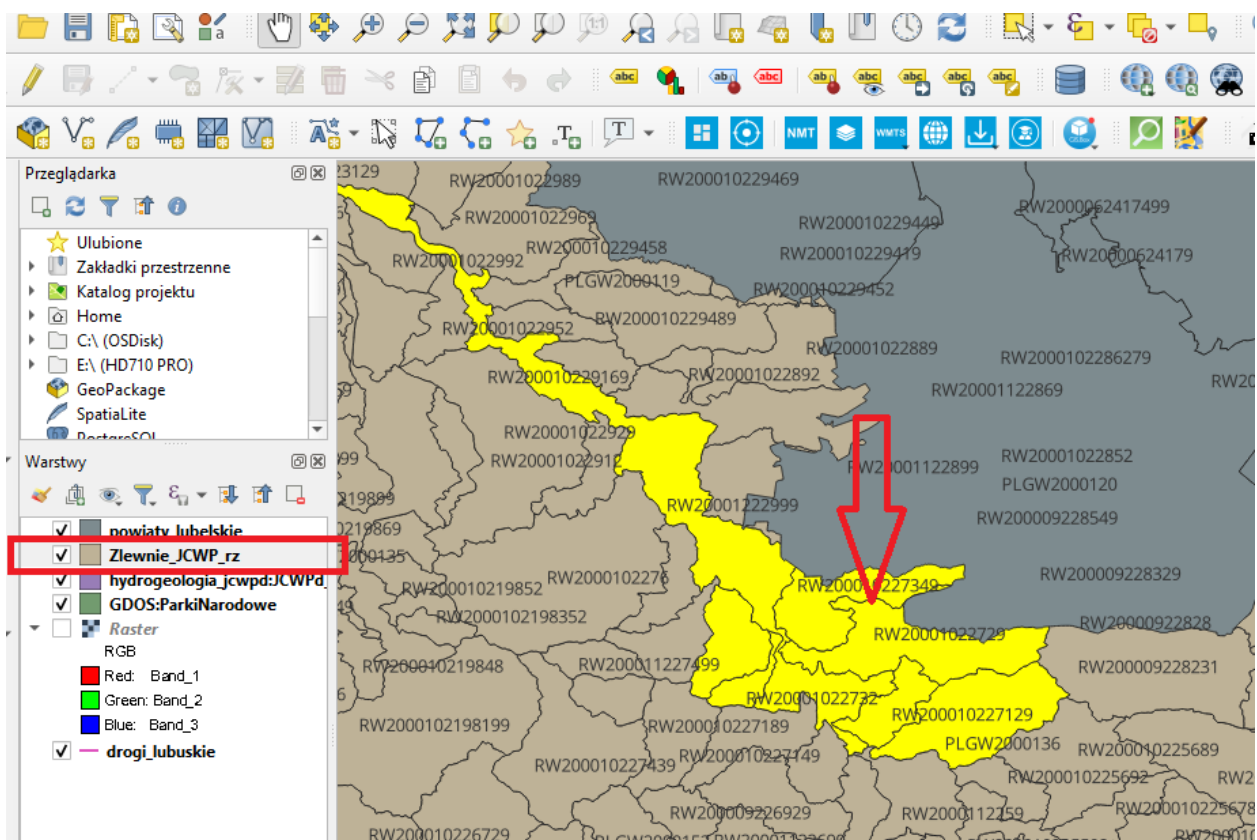

The purpose of the plugin is to download the characteristic cards of selected catchments from the website: [Jednolite czesci wod](#) to the folder of a given project.

USING THE PLUGIN

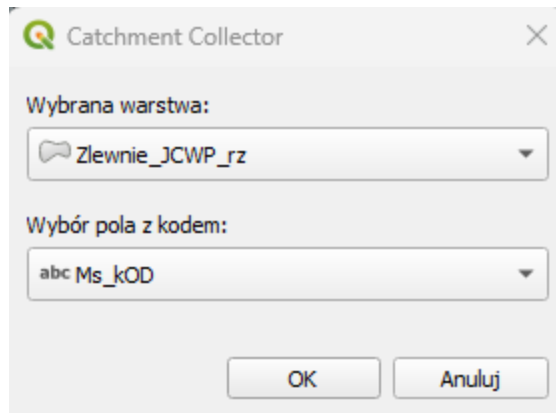

To use this plugin simply go to the QGIS plugin manager and install it on your system just like any other QGIS plugin. You will see a toolbutton in the plugins toolbar with the following image.

Before running the plugin, select the layer with the catchments and select the element of interest (you can use the “select by location..” tool in the vector/research tools menu)

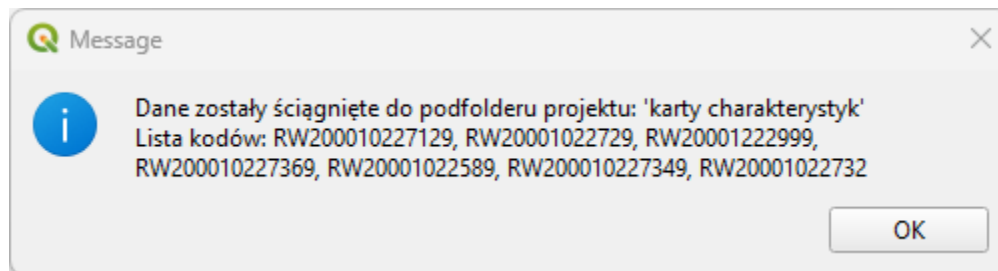

After clicking this toolbutton the following dialog will appear

Choose the layer with Catchment that you want to use (the previously marked layer with the catchment should already be selected) and the field that defines the code field.

Click OK and you will see a message dialog similar to the one below with list of downloaded cards.

The cards will be downloaded to a newly created 'Safety Data Sheets' folder in the project folder.

Nazwa	Data modyfikacji	Typ	Rozmiar
Karty_Charakterystyk	18.02.2025 17:02	Folder plików	
JCWP_data_download_QGIS_project.qgz	17.02.2025 22:22	QGIS Project	37 KB
